Subject: OR CZARA -- Input on completing the rationales for management measures

Deliberative/Pre-Decisional/Not for Public Disclosure

As you know, Lynda, Joelle and I have a call once a week to check signals among the three organizations (EPA HQ, NOAA and R10) as to how the work is progressing and to identify issues that need our attention. First of all, we three believe the team is doing a good job making progress towards our final decision come January. To date, the team has prepared write-ups and rationales for the New Development and OSDS management measures and we support moving forward with recommending approval for those two areas when we brief senior managers. We are also comfortable with moving forward recommending disapproval of the riparian forestry management measures for small and medium fish bearing streams and non-fish bearing streams.

At this point we would like to offer our collective guidance to the team on what we believe would be helpful in completing the write-ups on the remaining forestry management measures, namely landslides, roads, and pesticides. We think that it would be helpful to focus the write-ups and address the following areas and questions:

- Identify Management Measures
- Text of the MM (from G guidance or Agency documentation of additional MMs)
- How State submittal does or does not address the Measure; if it does not address the Measure, what are the specific ways it does not do so, using all reasonable interpretations of the MM?
- Brief summary of comments and/or new information provided on the proposed disapproval from the State and members of the public; and
- Options and/or recommendations.

To get to closure and decisions, please focus your efforts on the write-ups for these remaining forestry management measures.

Let us know if you have questions.

Thank you.

Christine Psyk, Associate Director
